

Career Growth Technology Teamwork Midwest Integrity

NATURAL GAS ENGINEER & DESIGNERS

You have to look at this GROWTH opportunity! Our Midwest client, a Midwest, engineering services organization, provides customer-focused solutions to natural gas pipeline planning, permitting, engineering and construction and much more. Their services range from full service EPC contracting, to designing and implementing small individual projects. Their client base ranges from the largest utilities to municipalities, co-ops and investor-owned utilities.

Functioning as a project team member, you will have the opportunity to participate in both local and nationwide projects, utilizing your technical and/or leadership abilities, and having the opportunity to maximize your potential.

You will be offered an excellent base salary, benefits and career potential since our client is part of a growing national engineering organization.

You have the following Credentials

- Bachelor of Science in Civil Engineering, Mechanical Engineering, or related field, and Professional Engineer registration preferred but not necessary.
- Three or more years of experience in gas utility pipeline operations and/or engineering, engineering/design of gas utility pipelines, project management, and proposal preparation skills required. Experience with a consulting firm preferred.
- Engineering, Design and Operations skills for: pipeline lateral taps, city gate stations, meter/regulator stations, distribution system, new main, system extension, high volume cast iron /bare steel renewal, system modeling, and applicable regulations and programs.
- Demonstrated skill working in a team environment as well as independently, good written and oral communication skills and good interpersonal skills for contact with clients and staff. Excellent time and cost estimating, decision-making, and mentoring skills needed. Possess the ability to develop effective strategic and tactical business development techniques, including client maintenance, business relationship building, and proposal preparation skills.

Dave Crow Crow Staffing LTD crowstaffing@cox.net 440-799-4260

Your responsibilities will be.....

- Develop and maintain professional business relationships with key project contacts; work with the Practice Manager to grow gas utility distribution engineering services in the marketplace.
- Attend various professional and industry conferences to develop client contacts and opportunities.
- Conduct periodic site/client visits and project meetings.
- Develop and prepare proposals for gas utility engineering /services, including:
- Direct, supervise, and manage engineering/design studies and activities
- Engineer/design complete functional natural gas utility facilities and distribution system additions (pipeline and distribution)
- Prepare and implement engineering/design projects, construction, procurement, inspection and project management plans
- Coordinate and/or supervise field technicians/ engineers and/or inspection staff.
- Coordinate subcontractor / sub-consultant efforts and services.
- Communicate with clients and representatives of regulatory agencies.
- Coordinate client and regulatory approvals.
- Project Management and Project Administration, including invoicing and collections and all elements of the Project Management function description.
- Provide technical support to Environmental and other groups, within areas of expertise.
